

GUNDU DHANUSH

+91-9491702710 | gundudhanush199@gmail.com | linkedin.com/in/dhanush-gundu | github.com/dhanush-devsecops

Education

Anurag Engineering College
Bachelor of Technology in Computer Science Engineering (AI&ML)
Kavitha Junior College
Intermediate (MPC)

Sep. 2023 – Present
Telangana, India
June 2021 – May 2023
Telangana, India

Experience

IIITDM Kancheepuram **September 2025 – October 2025**
AI Research Internship Kancheepuram, India

- Developed advanced ransomware detection models utilizing supervised learning (SVM, Random Forest) and reinforcement learning to identify zero-day threat patterns in system logs.
- Engineered high-performance data preprocessing pipelines and behavior-pattern extraction tools to automate the detection of system anomalies and unauthorized encryption attempts.
- Conducted research in the HPRCSE Lab focused on enhancing cyber-forensic auditing through real-time file-system monitoring and threat vector analysis for secure hardware-software integration.

CodTech IT Solutions **September 2025 – October 2024**
Data Science Intern Remote

- Leveraged Python, Pandas, and NumPy to perform deep-dive analysis on large-scale datasets, identifying critical operational trends and performance bottlenecks.
- Applied K-Means clustering algorithms to identify high-risk behavioral patterns and hotspots, providing actionable insights for system optimization and forecasting.
- Developed automated data visualization dashboards to communicate complex technical findings regarding high-risk behavior patterns to project stakeholders.

Projects

TriFusion AI: Hybrid AI Forensic Suite | *Llama 3, Flask, React, ADB* **February 2026**

- Engineered a custom Hardware-AI Bridge via ADB to intercept and audit live Android kernel data, enabling advanced cyber-forensic investigations into encrypted mobile threats.
- Implemented 4-bit Quantized Llama 3 (8B) on local hardware to perform 100% offline, private forensic audits of sensitive security data without external API reliance.
- Developed Explainable AI (XAI) Heatmaps to visualize linguistic threat vectors and social engineering cues, allowing investigators to identify threat patterns instantly.

Anvith Hospitals: Healthcare Management System | *React.js, Node.js, MySQL* **April 2026**

- Architected a full-stack digital solution to streamline patient registration, diagnostic reporting, and appointment scheduling, resulting in a 40% reduction in manual entry errors.
- Designed a responsive administrative dashboard in React.js that integrated secure user authentication and real-time medical record-keeping for clinical environments.
- Optimized MySQL backend schemas to handle concurrent records with 30% faster query retrieval times for patient medical histories and diagnostic reports[cite: 66].

Smart Car Parking System | *YOLOv8, React.js, Python* **October 2025**

- Built a real-time vehicle detection system using YOLOv8 computer vision models to automate occupancy tracking and slot management in high-traffic facilities.
- Integrated a dynamic React frontend with an IoT-ready Python backend to provide users with live, visual updates on parking slot availability.

Technical Skills

Languages: Python (Expert), Java, JavaScript (ES6+), SQL, C, HTML5, CSS3
AI/ML & LLMs: Llama 3 (Ollama), YOLOv8, SVM, Random Forest, K-Means, Quantization
Tools & Systems: ADB, Git, GitHub, Jenkins, Linux (Pop!OS), REST APIs, Streamlit

Leadership / Achievements

- Golden Performer:** Recognized as top Campus Ambassador at Emertxe Technologies for leadership excellence.
- Hackathon Finalist:** Participant in the SRM Smart Park Hackathon, focusing on IoT and Computer Vision.
- Athletics:** Represented the District Handball Team (Suryapet) in the state-level CM Cup competition.
